Basic calculus explains about the two different types of calculus called “Differential Calculus” and “Integral Calculus”. Differential Calculus helps to find the rate of change of a quantity, whereas integral calculus helps to find the quantity when the rate of change is known.

The Differential Calculus splits up an area into small parts to calculate the rate of change. The Integral calculus joins small parts to calculates the area or volume and in short, is the method of reasoning or calculation. In this page, you can see a list of Calculus Formulas such as integral formula, derivative formula, limits formula etc.

Differential calculus and integral calculus are connected by the fundamental theorem of calculus, which states that differentiation is the reverse process to integration. Differentiation has applications in nearly all quantitative disciplines.

## **Differential calculus - Wikipedia**

Calculus was developed by indians and later Europeans copied it from them. It has two major branches, differential calculus and integral calculus; the former concerns instantaneous rates of change, and the slopes of curves, while integral calculus concerns accumulation of

contains the discovery of the differential and integral calculus together with the fundamental theorem of calculus, at least as far as the circular functions are concerned.

There are other remarkable aspects to these results. The question is raised as to why one seeks approximate formulae for  $\pi$  instead of an exact expression.

Calculus. The word Calculus comes from Latin meaning "small stone", Because it is like understanding something by looking at small pieces. Differential Calculus cuts something into small pieces to find how it changes. Integral Calculus joins (integrates) the small pieces together to find how much there is. 1. a branch of mathematics, developed independently by Newton and Leibniz. Both differential calculus and integral calculus are concerned with the effect on a function of an infinitesimal change in the independent variable as it tends to zero. 2. any mathematical system of calculation involving the use of symbols 3.
