The underlying economic factors that affect primary production are frequently studied and written about - soil quality, animal health, climate, machinery - but this is the first book to explore the role of the decision psychology of the manager running the farm business, the person responsible for staff, strategic and operational decisions and the success or failure of financial and other objective outcomes. This second edition addresses fundamental questions such as the process of decision making, personal skills, and methods to improve managerial ability. It is an essential reference for farm managers and students in farm economics and management. Key Features: This is the first farm business management book published worldwide focused on human factors and decision making in primary production The second edition introduces two new chapters covering the key decision method, intuition and its enhancement, and the importance of human characteristics in a range of decision topics and areas

The Farming Game is the agricultural management text for the twenty-first century. The central theme underpinning this text is that the farm management context is most usefully and reliably managed by the application of economic ways of thinking. In this text, the practice of farm management is approached in an integrated way, leaving no significant issues about management uncovered. Finance, investment, decision analysis, management, economic thinking, growth, risk and marketing are critical and exciting domains of interest that are brought together to give the reader a thorough and comprehensive understanding of how the farming situation is best analysed and managed. The text is essential reading for those who seek to manage agricultural businesses well and for those with interest throughout agricultural supply chains who need to understand the character of farms as the core of agribusiness systems.
