The heartwarming true story of two penguins who create a nontraditional family. At the penguin house at the Central Park Zoo, two penguins named Roy and Silo were a little bit different from the others. But their desire for a family was the same. And with the help of a kindly zookeeper, Roy and Silo got the chance to welcome a baby penguin of their very own.

What drives so many to leave everything behind and journey alone to a mysterious country, a place without family or friends, where everything is nameless and the future is unknown. This silent graphic novel is the story of every migrant, every refugee, every displaced person, and a tribute to all those who have made the journey.

J.J. must baby-sit his little sister for a week while their mother is at work. The siblings have fun together doing different things each day, and on the last day they decide to paint a mural on the garden shed. Just when they're finishing, little sister has an accident and paint spills everywhere. When Mom arrives she is horrified by the mess, that is until she notices the mural.

Describes everyday classroom practices and exercises to help students in grades four through twelve read for accuracy, extract meaning from text, and interpret subject matter.

When the first edition of Teaching with the Brain in Mind was published in 1998, it quickly became an ASCD best-seller, and it has gone on to inspire thousands of educators to apply brain research in their classroom teaching. Now, author Eric Jensen is back with a completely revised and updated edition of his classic work, featuring new research and practical strategies to enhance student comprehension and improve student achievement. In easy to understand, engaging language, Jensen provides a basic orientation to the brain and its various systems and explains how they affect learning. After discussing what parents and educators can do to get children's brains in good shape for school, Jensen goes on to explore topics such as motivation, critical thinking skills, optimal educational environments, emotions, and memory. He offers fascinating insights on a number of specific issues, including * How to tap into the brain's natural reward system. * The value of feedback. * The importance of prior knowledge and mental models. * The vital link between movement and cognition. * Why stress impedes learning. * How social interaction affects the brain. * How to boost students' ability to encode, maintain, and retrieve learning. * Ways to connect brain research to curriculum, assessment, and staff development. Jensen's repeated message to educators is simple: You have far more influence on students' brains than you realize . . . and you have an obligation to take advantage of the incredible revelations that science is providing. The revised and updated edition of Teaching with the Brain in Mind helps you do just that.

Meet the animals that come out at night in this nocturnal adventure across the globe's habitats, including a glow-in-the-dark poster of the deep sea. See the jaguar prowling the Amazon rain forest, spot the lion pride on the African savanna, and visit a turtle nesting beach under the stars. Then, turn off the lights to see the ocean creatures glow on the 24" x 11.5" tear-out poster. The book's cover glows in the dark too! (Be sure to charge them in the light first.) Each spread features an enchanting illustration of a different nighttime habitat animated by a description of the activities of its various creatures, told in lulling prose. Fact boxes call out the names of the different animals and their unique qualities. Learn about the rain forest mammals called kinkajous, who slurp flower nectar by night and nest in tree hollows by day, and the rare and mysterious night parrots, who emerge after sunset in the Australian outback to feed on the seeds of spinifex bushes, among many other amazing nocturnal creatures. The wonderful starlit habitats you'll explore: City Rain forest Beach Australian outback Woodland Arctic Mountains Mangrove forest Desert Coral reef Savanna

A third prophecy, this time involving a leopard, comes true for eleven-year-old Martine, an orphaned South African girl who has mystical healing powers over animals, when she travels with her grandmother and best friend Ben to Zimbabwe.

In this book, the authors explain why telling students things over and over--and perhaps more slowly and more loudly--does not result in understanding. Instead, discover how to use a combination of questions, prompts, cues, direct explanations, and modeling to guide students' learning and build their understanding. Explore an approach to instruction that ensures you make the four strategic moves that help students become more capable and independent learners: (1) using robust and productive questions to check for understanding; (2) giving students prompts that focus them on the thought process they need to complete a learning task; (3) providing students with cues that focus them on specific information, errors, or partial understandings; and (4) explaining and modeling when students do not have sufficient knowledge to complete tasks. Chapters include: (1) Scaffolds for Learning: The Key to Guided Instruction; (2) Questioning to Check for Understanding; (3) Prompting for Cognitive and Metacognitive Processes; (4) Cueing Students' Attention for Learning; (5) Direct Explanation, Modeling, and Motivation; and (6) Answers to Questions on Considerations and Logistics. The book also includes: An Introduction; References; Related ascd Resources: Guided Instruction; and a Study Guide for Guided Instruction: How to Develop Confident and Successful Learners.
