Bearings Questions And
Answers*

Bearings are a way of expressing the angle between two objects. There is a specific set of rules about how bearings should be calculated and expressed. 1. Always measure bearings from the North line. 2. Always express your answers as three-figure bearings (so 60° would be 060°). 3. Always draw and measure bearings clockwise.

Bearings Practice Questions – Corbettmaths

A bearing is an angle,
measured clockwise from the
north direction. Below, the
bearing of B from A is 025
degrees (note 3 figures are
always given). The bearing
of A from B is 205 degrees.
Example. A, B and C are
three ships. The bearing of
A from B is 045° . The
bearing of C from A is 135° .
If $AB = 8\text{km}$ and $AC = 6\text{km}$, what
is the bearing of B from C?

two points. B. intersect at one point. C. do not intersect.

Math Questions With Answers
You will notice that most questions involving bearings will ask you to apply your knowledge of Pythagoras' theorem, basic trigonometry and everything you know about the sine and cosine rules. Always draw a sketch of the situation and I encourage you to include a sketch of a compass rose at each station/way-point. Gert Jan van der Marel

On bearings level 3 question 6. the opposite bearing of 208 degrees is 028 degrees. your answer is 28 degrees. you only have 2 digits. [Transum: Thanks so much Colin, for highlighting this error. The questions are generated from random numbers and the algorithm used in question 6 missed the three digit rule. The bug has now been eliminated.]

A bearing is used to represent the direction of one point relative to another point. For example, the bearing of A from B is 065° . The bearing of B from A is 245° . Note: Three figures are used to give bearings. All bearings are measured in a horizontal plane. Example 19. A boat sails from a certain port in the direction $N30^\circ W$.
