Question: PERIODIC TRENDS The Structure Of The Periodic Table Is Such That Elements With Similar Properties Are Aligned Vertically In Columns Called "groups Or "families". As You Will Learn In Class, This Leads To Smoothly Varying Trends In Properties Such As Ionization Energy And Atomic Radius, As One Moves Both Down Within A Specific Group Or Horizontally. ...

The periodic trend in the solubility of alkaline earth metal compounds is that as one goes down a group, it increases in activity. For example, barium has more activity than strontium or calcium. Use the solubility pattern observed for the known and unknown alkaline earth compounds in Part B to deduce the identity of the unknown alkaline earth metal.

Answers will vary, but yes the data values from the simulation will support the visual size comparison. Based on your answers in question 2 parts a-g, what is the general trend in the atomic radius of atoms within the same period? The atomic radius of atoms will decrease from left to right within a period.

Periodic trends (practice) | Khan Academy

Trends related to placement of elements on the periodic table are often taught using diagrams in a textbook. Students often memorize trends, but to get a true grasp of their meaning and what causes certain patterns is best understood when students create their own models and discuss the patterns with others.
