Modern plating technology is highly advanced, and has developed to cover a wide range of applications. In addition to the traditional use for surface finishing, plating technology can now offer novel processes to fabricate high-performance films or fine microstructural bodies in the microelectronics industry. This rapid progress reflects the potential for the electroplating plating method to become one of today's leading-edge technologies. This book will introduce a concept of a Microstructure Control Theory for plated films, describe and discuss various experimental results that support the theory, and finally, present a collection of experimental data on 53 types of plated metal/alloy systems with a special emphasis on their microstructure. The unique feature of this database is that most of the plating baths are simple and contain no additives. In addition, amorphous materials were used as substrates to avoid the effects of substrate structure, and single-crystal substrates were chosen to study the epitaxial growth phenomenon. \* Contains a comprehensive database for the microstructure of plated films \* The book is very logically structured with a very detailed contents which makes finding information easy \* The book gives a very good overview of the research and development in this field and each chapter is

Nano Plating (II): A Metallurgical Approach to Electrochemical Theory and Its Applications to Technology is the result of the author's 50 years of research. The author reviews the vast experimental results of electrochemical phenomena in light of metallurgical knowledge and proposes theories that can give new insights in electrochemical thermodynamics and predict many phenomena in this field. The book complements Tohru Watanabe's previous book on nano-plating published by Elsevier in 2004. Covers new electrochemical theories related to plating, including electroplating and electroless plating Explains the mechanism of dissolution and corrosion of metals in aqueous solutions Explains the power generation mechanism of various batteries, such as acid batteries and alkaline batteries Written by an expert in the field who has five decades of experience in metal electrodeposition and its structural investigation
