The UL Class 350 2-hour fire rating
means that when exposed to external
temperatures of over 1700°, the
internal temperature of the safe will not
exceed 350° for at least 2 hours – also
designed to protect paper records, but
at a higher level of protection than the
class one hour product

UL Fire and Impact Ratings – SafetyFile

When a 1 hour rated safe isn't enough, the next step up is the UL Class 350 2-hour fire rating. Much like the 1 hour rating, this means that when the Sentry or FireKing safe is exposed to external temperatures of over 1700° F, the internal temperature of the safe will not exceed 350° F for at least 2 hours.

UL Fire Safe Rating Guide

With FireKing's UL-2 Hour Fire and Impact Rated File Cabinets, you'll receive twice the asset protection. Each and every 2 Hour fire rated file cabinet is produced with Thermocell II, a proprietary insulation which provides added protection from fire and prevents internal temperatures from

The ratings relate to fire tests
designed to determine how quickly fire
can raise the temperature to
unacceptable levels. Fire-rated
assemblies are tested and certified in
their entirety. These designs are
identified in the UL Fire Resistance
Directory, which is updated yearly and
can be referenced at the Underwriters
Laboratories website

Finish, Table 721.3.2 95.5* * Linear interpolation from Table 721.3.2 of the Florida Building Code for Exposed Finish Block Mix – 55% limestone & 45% siliceous aggregates. Fire Rating: 2 Hour No. 8-2-910635S

2-Hour Fire Rating - Preferred Materials

Westbrook Block is a proud producer of Underwriters Laboratories® (UL®) Approved Fire-Rated CMU, both Light Weight and Normal Weight densities, in 2-, 3- and 4-hour configurations. Allowing for safe means of egress and a higher fire rating, these blocks should no longer be looked at as JUST standard grey CMU.

UL Fire-Rated | Westbrook Concrete Block

The fire-resistance rating of concrete

Online Library UI 2 Hour Rated Fire Resistive Alarm

masonry walls depends on the type of aggregate used in the units. A 2-hour rating can be achieved by a wall with an equivalent thickness of as little as 3 1/5 inches when expanded slag or pumice is used or 4 1/2 inches when siliceous gravel is used as the aggregate.

Two-hour fire ratings| Concrete
Construction Magazine

“UL has recently conducted research on a wide array of current products and systems originally certified under UL 2196, Tests for Fire Resistive Cables and ULC-S139, Standard Method of Fire Test for Evaluation of Integrity of Electrical Cables, and determined that they no longer consistently achieve a two-hour fire-resistive rating when subjected to the standard Fire Endurance Test of
